Sterling silver scenic thimbles and needlework tools

My first English silver thimble with a wide scenic band in relief, was the one I bought for 'Windsor' and having done a bit of research, this seems to be the most popular design of this type of thimble, with many examples still in existence.

Recently I was a lucky girl when I received a thimble from a non-thimble friend (thanks Phil) - he found a treasure for me on a recent visit to South Africa. There is no lettering to identify the scene, but it shows a bridge scene on a very wide band, on a typical tall, narrow Victorian thimble. It turns out to be the Menai Bridge scene and in contrast to my first purchase, this is a rare example.

I think two of these wonderful old thimbles is enough for my collection, but it's been fun looking for what else was made and I hope you'll enjoy this small journey.

Once my interest had been aroused, the hunt was on for more photo examples of these thimbles. I have been amazed at the range of thimbles made of the same scene or pictorial of historical buildings. The scenes include stately homes, palaces, bridges, castles and exhibition buildings and the picture wraps right around the thimble. I love the British medieval cathedral thimbles, especially having just watched the awesome series of six television programmes on British cathedrals in May 2020.

I have included a photo of some of the actual buildings, so that this may help with identification of your thimble.

There are different widths in the bands and my guess is that the wider the band, the earlier the thimble. Some scenes are banded by a plain narrow groove on each side - some have no upper groove separating the scene from the indentations.

These British scenic thimbles pre-date the placename thimbles of the 1920s which only have the names lettered around the thimble with no actual scene - they all reflect the idea of taking a souvenir home, first made popular by the Victorians. The thimbles of this study would originate from around the 1840s onwards.

Some of these thimbles are lettered with the name of the scene around the rim or within the scene (e.g Windsor) and many have the date included in the lettering. This qualifies them as commemoratives as well.

There was no evidence as to the maker/s of these thimbles, when I started working on this topic - mostly they have no hallmarks nor any maker's marks. I wonder if there was more than one thimble manufacturer making these thimbles in Victorian England.

Slowly pieces of the jigsaw puzzle are emerging and many of the makers are now known - thanks to the excellent research by Norma Spicer and Diane Pelham Burn.

I had heard the names of <u>Nathaniel Mills</u> and <u>Taylor & Perry</u> from Birmingham associated with the English scenic thimbles but there is nothing in the thimble literature at this stage to confirm this. There are hallmarked thimbles with London assay office marks for Osborne House and Windsor Castle by <u>Samuel</u> <u>Foskett</u>. He would have been one of the later makers, as is <u>George Unite</u>.

Aldridge had a theory that the thimbles that contain trees in the all-round design of some of these thimbles, appear to have been used as a trademark of their thimbles.
The thimbles I have encountered seven here with trees are: Abbotsford House - Crystal Palace Great Exhibition – Lichfield Cathedral – Osborne House – Sydenham Crystal Palace - Windsor

On re-reading Spicer's book on British registered designs, it is interesting to note that some of these scenic thimbles have a diamond-shaped registration mark placed on the thimble. In England, between 1842 and 1883, registered designs carried a mark to denote the registration date of a design. As these had to be registered, the name of the thimble maker may be found.

<u>Alfred Taylor</u> registered the Exhibition of All Nations 1851 design and he also made the thimbles.

<u>Henry Griffith</u> registered his design for and made the thimbles for some of the International Exhibition 1862 thimbles (139132).

There are two designs for the 1862 exhibition and the second one - where the mark appears on the thimbles - was also registered They were made by <u>George Cartwright</u> and <u>Horace Woodward</u>.

I have followed the lettering on the thimbles for the alphabetical listing, so the same building or scene may be in more than one place below - I have put in a cross-reference where applicable. The brief description of the building or place is not meant to be definitive, but I have added a date into the description where relevant in the 19th century.

Edwin Holmes indicates that there is a difference in the manufacture of the range of scenic thimbles. The earlier thimbles (cathedrals and buildings) were designed on a flat piece of silver, which were then rolled into a cylinder, seamed, with the apex added in last.

The later ones made towards the end of the 19th century are deep drawn and then the design is stamped on the thimble shape. These are shorter in height than the earlier thimbles and flatter at the apex, with the lettering around the band. As most of these were not hallmarked, they would probably have been made in the late 1870s and early 1880s (after which hallmarking for thimbles became obligatory in Britain).

The thimbles are made of sterling silver unless stated otherwise. I have not been able to find any mention of English gold or brass scenic thimbles.

The commemorative thimbles for Victorian royalty are outside this study.

Some of the scenes and buildings are unknown/unidentifiable and I can find no help in the thimble literature. I have placed these under Unknown.

As time has gone on since this topic was first begun, it seems prudent to include sewing tools, so that they are not lost to posterity. Look for the Stourport beautifully created object – created in brass. It takes its place amongst the Victorian needlework tools, without apology.

[Killarney Castle]

in the winter 1979 issue of *Collector Circle Gazette*, I found this image from the New York 1920s collection of Mrs Mary Gallatin Hoppin

it was described as Killarney Castle

I have no way of confirming the accuracy of this information, forty years on and the photo is VERY poor. Mary did leave a catalogue of her collection on her death in 1972

I can find no trace of a castle in Ireland of this name and with this blurry image ... there is however **Ross Castle** in the Killarney National Park, but it doesn't fit the image on the thimble.

Lichfield Cathedral Staffordshire – well known for its three spires with pine trees completing the scene 1840-1850

Newstead Abbey

founded as a monastery in the late twelfth century, Newstead became the Byron family seat in 1540 its most famous owner, the poet Lord Byron, sold the property in 1818. "Currently in the care of Nottingham Council, this impressive house retains the splendor of an important ancestral home, the mystique of an ancient monastery, and a vibrant sense of adventure left by its diversity of occupants not forgetting the legendary 'White Lady', whose spirit still patrols the grounds!"

so much confusion has arisen between thimbles for Abbotsford Abbey and these of Newstead Abbey, so only named thimbles are featured here.

Aldridge mentions a thimble lettered '<u>Newstead Aby the Reside of Lord Byron'</u> but there is no accompanying photo
