

Bog oak sewing tools

I was very much a thimble beginner when we visited Ireland in 1986. In my naivety I thought I'd be able to pop into an antique store and buy a bog oak thimble. To this day I don't own a 19th century bog oak thimble. I have to be content with a modern bog oak thimble bought thru a mail-order catalogue in Melbourne in 1986.

Bog oak, which covers other types of trees not only oaks (like bog yew), is a semi-petrified wood and is also known as bog wood. Trees, which fell into the peat bogs in Ireland, were buried in the acidic water associated with the bogs. This could be up to forty feet. It took hundreds or even thousands of years being buried in mud with an absence of oxygen to achieve this fossilised state. It is a very hard material. Divers are required to bring these rare finds to the surface.

I have always known this material as bog oak – current searches also name it bog wood.

expensive slabs of bog oak

Bog oak a very smooth, black (as ebony) material and items produced for the jewellery trade or as souvenirs were made between 1840s thru to 1930. Bog yew can be a browner shade.

The hand carving on bog oak features the shamrock and often the Irish harp as well. Bog oak requires special tools to carve it – whether it be the shape or the intricate Celtic patterns. You will notice that there is additional stippled patterning to complete the carved tool.

Bog oak thimbles are rare: even other sewing tools like pincushions and thimble holders are seldom seen. This is because of the high price of the original material.

I have only been able to locate one or two photos of the rarer sewing tools.

See the Guinness souvenir pincushion, which was never advertised as bog oak. Fakes of bog oak are known.

C: four pincushions

R: group of four sewing tools including two needleholders

Geoffrey Manley of Lyme Regis was a carver of exotic materials in the 1980s – these included bog oak, ivory and mammoth teeth. Another maker is from Shropshire. One of the antique makers is known.

I have included a date, where supplied by the seller or author.

Pincushions

The principal shape of bog oak pincushions is a pot – whether it is a saucepan or cauldron. In the latter case there may be metal handles. Some have feet or three legs. Owls are another shape.

Thimble holders

Thimble holders in various shapes are the most prolific bog oak sewing tool. Sometimes the holder may contain a brass thimble and the fit suggests it is original. The piece de resistance is to find a bog oak thimble inside.

A few are lidded; many with similar themes as bog oak pincushions.

Thimbles

Antique bog oak thimbles are rare. Modern thimbles of 1980s and 2010s are the antiques of the future.

Other sewing tools

These bog oak tools are the rarest of all.

It is recorded in Cummins and Taunton's book on chatelaines that a bog oak chatelaine exists. The attachments listed are scissors in a scabbard – a horn-shaped container with harp on the lid – a bucket thimble holder – a needlecase in the shape of a tower – barrel for tape measure.
